

[ABSTRACT OF THE DISCLOSURE]

98-35106

[ABSTRACT]

5 A tub cover in an automatic washing machine is disclosed, in which it is
possible to prevent washing water being pumped between an inner tub and an outer tub
and being provided to the inner tub from being scattered during a washing process, and
being collected in a recess of an upper tub cover. The tub cover of an automatic washing
machine includes a washing water discharge means for guiding washing water to an
10 inner tub, when washing water being pumped between the inner tub and an outer tub is
provided to the inner tub, or the washing water is splashed during a washing process.
